ISO Registered Company

Model 3600

Side-Mounted Vacuum Relief Vent

OBJECTIVE

The Model 3600 vacuum relief vents are intended for use on atmospheric and low pressure tanks, vapor recovery systems and process systems where vacuum relief is required. Built for dependable service and superior seat tightness, these durable vents are designed to be mounted to the tank structure or process piping.

TECHNIQUE

The weight loaded pallet in the vent housing allows the intake of air necessary to maintain the tank pressure within the permissible vacuum limit to avoid damage to the tank. Once the vacuum condition is satisfied and the pressure is within the permissible limits the pallet closes. The model 3600 virtually eliminates the intake of air except during normal tank in breathing.

CONSTRUCTION

Housing Material: The Model 3600 is a rugged design made to last. Available in Aluminum, Carbon Steel, 316 Stainless Steel or Corrosion Resistance Fiberglass.

TECHNICAL BULLETIN

3600 - TB

04-16

Represented
by:

DUNCAN CO

Ph: 612-331-1776
www.duncanco.com

Trim Material: 316 SST - Standard on all metal vents.
Fiberglass - Standard on all FRP vents.

Pallet Diaphragm Material: FEP TFE - Standard.
Also available in FKM, EPDM and Buna-N.

SPECIAL FEATURES

Modular. The Model 3600 side mounted vacuum vent is part of the Valve Concepts, Inc. modular vent product line. The 3600 is used in the pressure / vacuum vent with pipe-away and the pressure only vent with pipe-away. These vents can either be direct acting (weight-loaded or spring-loaded) or pilot operated.

Maintains Accurate Vacuum Settings. The pallet is fabricated to the precise weight necessary to maintain an accurate vacuum setting. The minimum setting available is down to 0.25 oz/in² and the maximum vacuum setting is upwards to 1 psig on all sizes. As with every vent supplied by Valve Concepts, Inc. a Certified Test Certificate is included verifying the accuracy of both set point and leakage rate. On all direct acting vents supplied by Valve Concepts the leakage is less than 1 SCFH at 90% of set point.

Condensate Drainage. Self-draining housing body and drip rings keep condensate away from seating surfaces, preventing freezing, binding and clogging.

Air-Cushioned Seating. Air-cushion seating for low evaporation losses. The pallets have outer guiding and center stabilizing stem to provide self alignment and tight seating.

Sizes - Connections. Available in Sizes 2" through 14". CS and SST vents have Raised Face Flange, Aluminum and FRP vents have Flat Face Flange to mate with standard ASME 150# flange connections. Ref to position 3 on coder for selection of DIN flanges.

MATERIALS OF CONSTRUCTION		
Series	Housing	Pallet *
3600CS	CS	316 SST
3600SST	316 SST	316 SST
3600D	Derakane® 470	Derakane® 470
3600F	Hetron® 800	Hetron® 800
3600A	Aluminum	Alum or 316 SST

* For settings below 0.5 Oz/in² requires Polycarbonate Pallets; only with CS, SST, and Alum.
Derakane, Furan and Hetron are Registered trademarks of Ashland Inc.
Hetron is now offered as an equal replacement to Furan.

STANDARD/GENERAL SPECIFICATIONS

Gaskets: Standard: TFE/TFE Rope

Painting: Standard: Exterior coating will be a combination of Cashco Paint Specs #S-1777 epoxy and #S-1743 powder coated. Fasteners, seat surfaces and corrosion resistant parts excluded.

Diaphragm Temperature Limits: FEP-TFE:
 -400° to 400° F (-240° to 204°C)
 Fluorocarbon Elastomer – (FKM):
 -20° to 400° F (-28° to 204°C)
 Buna-N (Nitrile-NBR):
 -30° to 200° F (-34° to 93°C)
 EPDM (Ethylenepropylene):
 -40° to 225° F (-40° to 107°C)

Alternate Paint: See Opt-95OS.

OPTION SPECIFICATIONS

ELECTRIC TRACE - Electric heat tape is wrapped around external surface of the vent body. A thermal insulation jacket is secured over the tape and vent body to minimize heat loss. Commonly used to prevent the formation of ice during freezing conditions. See STEAM JACKETING if elevated process temperatures are desired.

STEAM TRACE - Copper tubing is wrapped around the external surface of the vent body. A thermal insulation jacket is secured over the tubing and vent body to minimize heat loss. Commonly used to prevent the formation of ice during freezing conditions. See STEAM JACKETING if elevated process temperatures are desired.

STEAM JACKETING - Cast aluminum jacket with integrated carbon steel steam chambers are bolted around the vent body. Vent valve and jacket are shipped unassembled as vent valve must first be installed. Commonly used to prevent stored media vapors from crystallizing at ambient temperatures.

Option -40: NACE CONSTRUCTION. Internal wetted portions meet NACE standard MR0175, when exterior of the vent is not directly exposed to a sour gas environment, buried, insulated or otherwise denied direct atmospheric exposure.

Option -95OS: OFFSHORE installations. Coating of all exterior surfaces will be per Cashco Paint Specs #S-1777 epoxy. Fasteners, seat surfaces and corrosion resistant parts excluded. Painting of fasteners optional upon special request.
